Summary

MERN + AI Engineer building stateful agentic workflows and intelligent full-stack platforms. Specialized in **React, Node.js, Express, MongoDB, Python, fastAPI, LangChain, and LangGraph**. Experienced in architecting hybrid RAG pipelines, vector search, and real-time project.

Technical Skills

Programming & Querying: Js, Python, C++

Frontend Development: ReactJS, HTML5, CSS3, JavaScript (ES6+),

Backend Development: NodeJS, Express.js, Nest.js, fastAPI

Databases: MongoDB, PostgreSQL, Redis

DevOps & Cloud: Docker, GitHub Actions, Nginx, Vercel, Render

Testing : Jest, React testing library

AI Frameworks: LangChain, LangGraph, RAG, Vector Database(ChromaDB/Faiss)

Projects

Full-Stack Music Streaming Platform (Spotify Clone) | MERN · Docker · ImageKit.io

Nov 2024 – May 2025

- **Engineered** a full-stack music streaming **Microservices** platform using **React.js, Node.js/Express.js, and MongoDB**, with RESTful APIs and a custom HTML5 Audio player.
- **Designed MongoDB data models** for users, songs, playlists, and favourites, with optimized relationships for efficient data retrieval.
- **Containerized backend** services using **Docker** and integrated **ImageKit.io** for scalable music file upload, storage, and delivery.
- **Microservices and Container :** Using microservice architecture and docker for running all the microservices on different port
- **GitHub Actions CI/CD pipelines** for automated testing and deployment.

Production RAG System | FastAPI · LangGraph · Pinecone · PostgreSQL · React · Docker

April 2026 – May 2026

- **Production-oriented RAG system** using FastAPI, LangGraph, Pinecone, and PostgreSQL with stateful, conversation-aware AI workflows.
- **Asynchronous PDF/TXT ingestion**, document processing, chunking, embeddings, and vector indexing with Pinecone for semantic retrieval.
- **Metadata-based tenant isolation** using user_id and conversation_id to ensure retrieval remains scoped to the correct user and conversation.
- **Streaming responses, structured error handling, and AI/application observability** using LangSmith and Logfire for reliable production operation.

TruthLensAI – Multimodal Misinformation Ana. | React · FastAPI · LangGraph · Gemini

July 2026 – Sept 2026

- **Multimodal misinformation-analysis platform** that analyzes text, images, webpages, and YouTube content to extract and verify factual claims.
- **LangGraph-based agentic pipeline** for claim extraction, parallel multi-source evidence retrieval, semantic filtering, and evidence-based claim assessment.
- **Google Fact Check, Tavily, NewsAPI, WHO, PubMed, Wikipedia, and domain-specific sources** to retrieve and compare supporting or contradicting evidence.
- **Designed** an AI analysis layer that generates **verdicts, confidence scores, harmfulness/risk assessments, and explainable evidence summaries** for each claim.

Professional Experience

- **Designing , developing** and maintaining the RAPS website
- Designed and implemented a **RESTful API** using **Node.js** and **Express.js**, including secure user **authentication (JWT)** and CRUD operations for blog posts (create, read, update, delete).
- Built a dynamic and responsive user interface using React and React Router, tailwind CSS , utilizing functional components and hooks for efficient state management .
- Implemented advanced features such as image/file upload (e.g., using Multer), search/filtering functionality, and markdown rendering

Education

B.Sc. in computer science(Ongoing)

Bk Birla college of Arts Commerce and Science | Expected Graduation : 2028

Awards & Recognitions

- Participated in **Ideation Competition** at an inter-college technical event, presenting and developing an innovative solution concept.
- Participated in **Smart India Hackathon (SIH)**, collaborating on a technology-driven solution to address a real-world problem.
